REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claim(s), in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in claim(s) 22-40, wherein the claimed invention comprises An apparatus for improving a transmission of a free-space optical communications signal passing through a window having a first imperfect surface including a plurality of non-flat surface voids, comprising a void-filling material that is applied in a non-solid form to the first imperfect surface so as to fill any non-flat surface voids in an area on the first imperfect surface through which the optical communications signal is to pass and cured into a solid form such that an outside surface of the void-filling material adjacent to the first imperfect surface is substantially perfectly planar, wherein the void-filling material is selected to have an index of refraction that substantially matches an index of refraction for the window at an optical wavelength corresponding to the free-space optical communication signal, as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Application/Control Number: 09/904,880

Art Unit: 2873

Bourdelais et al. (6721102) discloses a transparent polymeric film having a top and bottom surface comprising a plurality of complex lenses on at least one surface thereof.

Bernkopf (5353133) discloses a light control material includes a two-layer optical system for producing autostereoscopic and dynamic images in thin-film materials.

Steenblik et al. (5359454) discloses a flat-panel display system and a display method utilizing microprojection techniques whereby each pixel of the display acts as its own microprojector.

Suzuki et al. (4427265) discloses a diffusion plate having microlens-like curved surfaces of a size of 10 to several tens of microns arranged periodically in two dimensions on the surface of the substrate thereof.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brandi N Thomas whose telephone number is 571-272-2341. The examiner can normally be reached on 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Georgia Epps can be reached on 571-272-2328. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
